Freedom Scientific is introducing...

...the innovative project in co-operation with our trusted regional distributor, ITAC Consulting Ltd, whose primary objective is a strategy in further empowering the visually impaired persons of Africa!

The first phase commenced in April 2007 in Kenya through the provision of free training and distribution of assistive products at schools, colleges as well as professional levels.

Amongst many other institutions, that benefit from this co-operation, are the *World Bank Public Information Center*, the *Kenya Society for the Blind*, the *Thika High School for the Blind* and the *Machakos Teachers Training College*.

The total beneficiaries in this first project phase are at least 100 individuals and users. Take only the institutions, where all visually impaired students will have access to the computers during their training schedules! Not to mention the multitude individuals, who can improve their work with the latest computer technology for visually impaired and blind employees.

For more information on eligibility and training in this project, please contact:

James Gichuhi.
